

This program was designed to work with Linux Mint 18.2 'Cinnamon 32-Bit'.

You can find an ISO file for this operating system at - <https://linuxmint.com/edition.php?id=238>

I used Oracle Virtual Box to run the virtual machine, this can be found at - <https://www.virtualbox.org/>

Once the operating system is installed you will need to install the packages below for the project to work properly:

```
sudo apt-get install libghc-static-hash-dev
sudo apt-get install libgirepository1.0-dev
sudo apt-get install libglade2-dev
sudo apt-get install libopenal-dev
sudo apt-get install libalut-dev
sudo apt-get install gtk2.0
sudo apt-get install gtk3.0
sudo apt-get install build-essential libgtk2.0-dev
sudo apt-get install build-essential libgtk-3-dev
sudo apt-get install libwxgtk-webview3.0-dev
sudo apt-get install libwxgtk-media3.0-dev
```

Once these are installed you should be able to compile and run the program. Press 'Begin' to start.
